

Discover the Power of Personalized Functional Medicine Testing

Mold exposure is more common and can have significant health consequences than you may realize, but with MosaicDX's testing, you can make informed decisions to improve your quality of life.

With the **Myco-Metabolic Panel**, you can take control of your health, uncovering mycotoxin exposure and its negative impacts on bodily processes critical to good health. This comprehensive test combination offers clarity and valuable insights for you and your practitioner to effectively address health challenges.

Take proactive steps towards improved health and discover if your symptoms are mold-related.

MosaicDX Makes Testing Simple and Convenient with an Easy At-Home Urine Collection

What are Mycotoxins?

Mycotoxins are harmful substances made by certain species of mold. They are increasingly recognized as a global health threat because they can cause short-term and long-term health problems. They are some of the most prevalent toxins and can come from many sources including buildings, vehicles, and food.

What are Organic Acids?

Organic acids are naturally occurring byproducts of your body's natural metabolic processes. They can provide insights into the underlying factors behind your symptoms and offer an assessment of your overall health.

A Powerful Combination

The **Myco-Metabolic Panel** integrates the MycoTOX Profile with the Organic Acids Test (OAT), providing synergistic insights into toxic mold and mycotoxin exposure and its negative impacts on critical bodily functions like energy production, detoxification, and nutrients.

This powerful tool equips you and your healthcare provider with insights to develop personalized and comprehensive treatment plans for mold exposure, while directly addressing underlying health issues for improved outcomes.
