How Can Someone Be Exposed?

The Centers for Disease Control and Prevention (CDC) estimates that over **4.5 billion people** worldwide are exposed to aflatoxins through dietary intake of contaminated foods:

- Corn
- Cereals
- Ground and tree nuts
- Spices
- Dried fruits
- Apples
- Coffee
- Meat
- Milk
- Eggs

Exposure also happens through **dermal contact and inhalation** since mold contamination can affect nearly all indoor materials including:

- Drywall
- Paint
- Wallpaper
- Carpeting
- More

MosaicDX's MycoTOX Profile®

Trust our test to help unlock the mystery behind your symptoms, breaking the dead end of treatment.

Evaluates the 11 most prevalent and harmful mycotoxins produced by molds.

Utilizes cutting-edge technology to deliver the most accurate test results.

Ability to detect mycotoxins at even very low levels to identify potential health risks.

What Are Mycotoxins?

Mycotoxins are harmful substances made by certain species of mold. They are increasingly recognized as a global health threat because they can cause short-term and long-term health problems. They are some of the most prevalent toxins and can come from many sources including buildings, vehicles, and food.

Why Test For Mycotoxins?

Mycotoxins can cause adverse health effects that can show up in different ways and may have unclear symptoms. By testing for mycotoxins, you can safeguard your well-being by proactively identifying and addressing potential health risks that may otherwise go unnoticed.

Ask your practitioner if you are a candidate for a MycoTOX Profile®
