

Going **Beyond** SNPs.

Polygenic Risk Scoring for a More Personalized Path Forward

DNA Signature, a next-generation suite of genomic profiles, looks beyond individual variants, combining polygenic risk scoring with prioritized recommendations to translate complex genetics into personalized strategies for better health.

"Unlike single-gene tests that detect high-penetrance mutations, PRS combine the small effects of numerous variants across the genome."¹

Explore five DNA profiles, each designed to deliver personalized, actionable insights.

Metabolic Path

Evaluates foundational genomic variations governing cellular energy production, nutrient utilization, neurotransmitter balance, gut health, methylation, detoxification and nutrient needs.

Toxins

Evaluates key genetic variations governing environmental toxin clearance, oxidative stress response, and essential methylation pathways.

Mind & Mood

Offers insights into genetic factors associated with emotional regulation, cognitive longevity, stress resilience.

Spectrum Map

A specialized genomic tool engineered to evaluate the interconnected biochemical pathways influencing neurodivergent traits, including Autism Spectrum conditions, ADHD, executive function variations, and sensory processing differences.

Wellness

Provides a comprehensive genomic blueprint of foundational vitality, metabolic potential, physical performance, and biological aging trajectory. By evaluating interconnected pathways governing cellular energy, this panel pinpoints an individual's unique physiological capacity.

Profile Price: \$150 per profile | One-Time DNA Sequencing Fee: \$189 per patient

DNA Signature provides easy-to-understand test reports with targeted guidance on: Diet & Supplements, Lifestyle & Exercise, & Targeted Functional Testing

DNA Signature profiles pair perfectly with MosaicDX core tests, including Organic Acids Test (OAT), Environmental Toxins, & more. They can also be ordered as a stand-alone test.

Patients with the following symptoms or conditions may benefit from testing:

- Complex Chronic Diseases
- Wellness Optimization
- ASD
- Neurodivergent
- Metabolic Syndrome
- Fatigue
- Malaise
- Mood Disorders
- Cognitive Risk / Disorders
- Oxidative Stress
- Neurodegenerative Disease / Risk
- Oxidative Stress
- Chronic Inflammation
- Toxin Exposures
